- Current affairs & politics

Ján Benedek

SENIOR SOFTWARE ENGINEER

Ing., BSc. · Embedded & Safety-Critical Software

Senior Software Engineer with 10+ years of experience delivering safety-critical and embedded software for automotive and industrial platforms. Specialised in C, C++ and Assembler for microcontrollers, with expertise in AUTOSAR-compliant Functional Safety software developed to ISO 26262 (ASIL D), including FMEA. Hands-on across NXP S32 platforms and STM32, spanning the full lifecycle - architecture, implementation, CI/CD, integration and delivery. Physics-trained problem solver with a pragmatic, quality-first mindset.

PROFESSIONAL EXPERIENCE

CEO & Safety Software Developer

May 2025 - Present

Reid Recoin s.r.o. - Contract with NXP Semiconductors

- Founded and lead an engineering consultancy delivering safety software to any company requiring my services.
- Develop AUTOSAR-compliant safety software and documentation for multiple NXP platforms to ISO 26262 (ASIL D), including FMEA.
- Software development on the NXP S32N platform (2 years to date).
- Re-architected the Bamboo CI/CD pipeline with parallel builds, cutting validation time by at least 50%; every pull request now must pass compilation, Coverity static analysis and hardware-in-the-loop validation - checks previously run only near release.

Safety Software Developer (Self-Employed)

Jul 2022 - Apr 2025

NXP Semiconductors - Contractor

- Designed and implemented AUTOSAR-compliant safety software for a range of NXP platforms to ISO 26262 (ASIL D), producing FMEA and supporting safety documentation.
- Implemented a safety library for the S32ZE platform, including its multicore communication.
- Implemented software fault processing for the S32K1 platform.
- Built a VS Code extension (JavaScript) that automates NXP plugin generation.

Embedded Software Developer (C/C++)

Jul 2017 - Jul 2022

BSH Drives and Pumps s.r.o.

- Implemented Functional Safety for a new platform (NXP and STM32 G0).
- Developed a reusable Timer library and optimised C++ for constrained embedded targets (STM32 G4).
- Created the project framework and build (make) process for the Motor Control project.
- Acted as integrator - Git revisioning, release deliveries and smoke testing.

Volunteer

Aug 2016 - Jul 2017

Luník IX Community, Košice

- Volunteered for a year supporting a marginalised community in Košice.

Embedded Software Developer (C/C++)

Jan 2016 - Aug 2016

BSH Drives and Pumps s.r.o.

- Developed EEPROM handling firmware for embedded devices.

NOC Operator (Part-time, Student)

Jan 2014 - Dec 2015

Astrium Services BC s.r.o.

- Provided front-line hotline support to ship captains, correcting satellite antenna misalignments to maintain maritime communication links.

KEY PROJECTS

Electronic Differential for an EV Go-Kart

MSc Thesis

Developed an electronic differential for a dual-motor electric kart, computing and sending per-motor speed commands to the controllers to achieve correct cornering behaviour.

High-Precision Double Pendulum

BSc Project

Designed the measurement hardware and wrote the firmware in Assembler (for speed) to measure the oscillation period with high accuracy.

Line-Tracking Miniature RC Car

Embedded / Assembler

Built a line-tracking miniature RC car with real-time control firmware written entirely in Assembler.

EDUCATION

MSc in Applied Mechatronics (Ing.) - magna cum laude

2013 - 2015

Faculty of Electrical Engineering & IT (FEI), STU Bratislava

BSc in Physics

2010 - 2013

Imperial College London, United Kingdom

A-Levels (A2)

2008 - 2010

Fyling Hall School, United Kingdom

Mathematics (A*), Further Mathematics (A*), Physics (A), Chemistry (B), Biology (C)

References and detailed project portfolio available on request.
